Telecoms Engineering

Course Name

Juniper traffic management firewall maintenance

Course Description

This course gives an in depth introduction to first line maintenance of the Juniper SRX 1400 firewall. Content covered includes an overview of the Juniper SRX product suite, the principles of firewall operation and how the network is configured. The SRX will be broken down from a maintenance perspective, with routine tasks, preventative maintenance and unit replacement covered in detail. The delegate will apply the theoretical knowledge gained through a hands on practical lab, using the SRX as deployed for Network Rail. Engineers working on other Juniper SRX firewalls will find the generic content useful. Structured practical exercises give hands on experience of the SRX equipment and maintenance.

Audience

Telecoms technicians and engineers

Duration: 2 Day(s) **Class Size:** 8

Competence Name Awarded

Undertake corrective and preventative maintenance of Transmission systems.Juniper Firewall Maintenance

Competence Awarded

Tel 08.76

Course Code
