

Infrastructure & Engineering

Course Name

Design for Reliability - Advanced Courses: Process Management

Course Description

This course focuses on how to improve the competency of manufacturers such that they understand how to identify key characteristics in association with other DFR tools. It also outlines expectations for how a process should be documented and stored. Network Rail staff from quality, reliability and SQA roles need to understand how to participate effectively as a customer by understanding correct practices in the application of Process Management.

Audience

Predominantly: a) Personnel at Band 4 and above within NR across engineering, procurement, Supplier Quality Assurance (SQA), quality, reliability and product acceptance. b) Supplier engineering, quality and reliability staff

Duration: 2.5 Day(s) **Class Size:** 18
