

Signal Engineering

Course Name

In Bearer Clamp Lock (IBCL)

Course Description

This course is designed to train persons who are responsible for undertaking installation or corrective and preventative maintenance on IBCL as part of their duties on Network Rail Infrastructure.

It is designed to develop a person's knowledge, understanding and skills and is therefore particularly suited to persons required to prove their capability in these areas.

Please note this is a training event only that does not award any competence.

Audience
