Technical & Vocational

Course Name

Personal Track Safety

Course Description

Personal Track Safety (PTS) should be undertaken by anyone who is required to routinely work on or near the line. The recommendation is that anyone who is required to go on track (on or near the line) on more than 12 occasions in a 12 month period should obtain the PTS competence. PTS is the foundation competence for all other Track Safety Competencies (e.g. Lookout, IWA, COSS etc). The eLearning (Step 1) covers the requirements for working safely on the track and includes track terminology, safe systems of work, working on stations and includes working near overhead lines. The Practical Day (Step 2) uses group and individual activities to practise the learning attained from the eLearning. There will also be a track visit to a live rail environment. Any delegate who is required to work in an OLE or 3rd Rail area under PTS must obtain PTS AC competence (this course includes that requirement). On completion of the training and following written and practical assessments, a statement of achievement will be issued for each delegate denoting underpinning knowledge and ability to carry out a variety of tasks associated with 'Personal Track Safety'.

Audience

Anyone expected to work on the rail infrastructure.

Duration: 1 Day(s) **Class Size:** 12
